Clinical research

In progress:

- Scientific coordinator of the PRECARE cohort study, cohort of 10 800 pregnant women followed prospectively in the Paris North area. The main objective of this cohort is to study the impact of maternal insecurity on maternal and perinatal health and to explore the mechanism of social inequalities in perinatal and maternal health (Grant from the French ministry of health).
- Scientific coordinator of the TRAJECTOIRES study: cross-sectional approach of pregnant women in precarious social position (Grant from the PRES SPC).
- Scientific coordinator of the PREVIANS study, preventability and onset mechanisms of serious adverse events in obstetrics, description and systemic analysis (Grant from the French ministry of health).
- Scientific coordinator of the Trithy study, evaluation of thyroid function in fetuses with Down Syndrome (Grant from the French biomedicine agency).
